# Far Flung Forest Landscapes in the Anthropocene

## └ Context

### └ Forests in the Anthropocene

1. Anthropocene = proposed geological epoch distinguished by human impacts
2. One proposal is it started about 1950 with acceleration
3. Atmospheric changes
4. Land-use changes
5. Biodiversity changes

## └ Context

## └ Today's Talk

- ① Economic and Ecological Landscape Extensions
- ② Trade Networks of Forest Landscapes
- ③ Global Forest Networks
- ④ China's Forest Networks: Global
- ⑤ China's Forest Networks: Domestic/Local
- ⑥ Conclusions
- ⑦ Future Work

1. - Intro/Context
2. - Forests are globally important
3. - Anthropocene effects
4. - Global forest loss and gain and change
5. - Global greening = India(Agriculture) + China(Forests)
6. - Economics\*Ecology = Landscape Extended Models
7. - Network Analysis of China's Greening
8. - Global Scale
9. - Local Scale
10. - Landscape = Chen 2019
11. - Resilience Analysis of China's Forest LE-MRIO
12. - Conclusions and Future Work
13. - Acknowledgements
