

Far Flung Forest Landscapes in the Anthropocene

Structural analysis of China's embodied forest network

M.K. Lau (Ph.D.)

Chinese Academy of Sciences and Harvard University

November 13, 2020

Forests are Important

- Carbon Storage
- Water and nutrient cycling
- resources(wood, food)
- Biodiversity
- Human Health and Culture

Forests in the Anthropocene

- Forests are changing from human impacts
- Large effects of land-use
- How do we assess direct and indirect effects?
- How do we address systems-level effects?

- ① Economic and Ecological Landscape Extensions
- ② Trade Networks of Forest Landscapes
- ③ Global Forest Networks
- ④ China's Forest Networks: Global
- ⑤ China's Forest Networks: Domestic/Local
- ⑥ Conclusions
- ⑦ Future Work
